Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.adgp.ebi.ac.uk -. This Drosophila melanogaeter BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ô

Determination of this BAC-end sequence was carried out as part of a collaboration with the Bucopean Drosophila Genome Project (BDGP) - http://www.edgp.ebi.ac.uk - This Drosophila Genome Project (BDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                  ö

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).
The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was propared by Kazutoy oscegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial

BCORI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; on bw sp, the same strain used for the BDGP's P1 and BST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GTATAACCAGATTTGTCTGTGTGCGATTGTCATTACCTAGCCGTGTATCGAGAACTAGGG

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Gsoegawa and Aaron Mammoser in Pleter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial Ecorl digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2: on was, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Determination of this BAC-end sequence was carried out as part of collaboration with the Barkeley Drosophila genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see thtp://www.fruiffly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial BCoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2; on bw sp, the same strain used for the BDGP's pland EST libraries. A more detailed description of the library, and how to order individual BAC clones, the entire library, or filters for hybridization from the BACFAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

## ALIGNMENTS

Arabidopsis thaliana histone H3.3-like DNA fragment (intron 2) AAT85997 standard; DNA; 494

Plant expression regulation sequence; intron 2; histone; herbicide tolerance; 5-enolpyruvylshikimate-3-phosphate synthase;

96WO-FR001109

Gigot C;

New regulatory sequence for chimeric gene expression in rapidly growing parts of a plant - includes at least one intron from a plant histone gene and is useful for imparting resistance to herbicides.

The known cosmid clone c22 of Arabidopsis thaliana contains two histone H3.3-like genes. Digestion of clone c22 with restriction enzymes Alul and Cfol generated a fragment of 494 bp having the present sequence. This fragment, designated intron 2, was ligated to synthetic linkers for cloning into plant expression vectors. In addition to the intron 2 sequence, the vectors contained a plant promoter and a herbicide tolerance gene (e.g. a mutated version of the 5-enolpyruvylshikimate-3-phosphate synthase (BPSPS) gene). The intron enhances expression of the herbicide tolerance gene in rapidly growing parts of plants. The intron can also be used to enhance expression of genes that impart resistance to

The invention relates to a nucleic acid comprising a sequence at least 18 bases in length of a segment of the chemically pretreated DNA of genes associated With pharmacogenomics according to one of the sequences of the genes ALDH6 (NM 000693), CYP11A (NM 000781), CYP11B (NM 000797), CYP1A (NM 000781), CYP11B (NM 000781), CYP11B (NM 000518), CYP1A (NM 000781), CYP1A (NM 000797), CYP1A (NM 000797), CYP1A (NM 000797), CYP1A (NM 000797), CYP1A (NM 000776 and NM 019901, NM 019802) NM 019802) NM 019802) NM 019802, NM 019809) and their complementary sequences, or a sequence (S1) chosen From 87 careament to convert cytosines (NM 019908, NM 019909) into utacils. Also included are an oligomer (II) in particular an oligometical action or a peptide nucleic acid (NNA)-oligomer, comprising in each case at least one peptide nucleic acid (NNA)-oligomer, comprising in each case at least one peptide nucleic acid (NNA)-oligomer, comprising in each case at least one compared to a chemically pretreated DNA of genes associated with the methylation state (CpS) and/or detecting SNPS (single nucleotide polymorphisms) of the 87 sequences. The cligomers may also be used as PCR primers. The set of 87 nucleic acids and their complements is useful for diagnosis and therapy of solid tumours and cancer. The present sequence data for this patent did concern form part of the printed specification, but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  3266
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              g
```

The invention relates to a nucleic acid comprising a sequence of at least with call signaling. The activity of the modified sequences of the invention may be described as cytostatic. The object of the invention is to provide the chemically modified DNA of genes associated with cell signalling, as well as objectnicerides and/or PNA-oligomers for provide the chemically modified DNA of genes associated with cell signalling, as well as objectnicerides and/or PNA-oligomers for particularly suitable for the diagnosis and/or therapy of genetic and epigenetic parameters of genes associated with cell signalling. The chemically modified DNA provided by the invention is useful for diagnosis and therapy of diseases such as sociated with cell signalling. The signal in records ABL70111-ABL70626 represent chemically pre-treated given in records ABL70111-ABL70626 represent chemically pre-treated sequence data for this patent is not represented in the printed sequence data for this patent is not represented in the printed sequence and provided by the confidence information supplied by the ö 3327 ITTIAGITTITATITGITTTTTATTTTTTTTTATTTAAAITTTTATTTTTTAGGAAGITTT 3386 Cell signalling, cytosine methylation; cell signalling disease; cancer; tumour; cytostatic; ds. Nucleic acid, useful for diagnosis and therapy of diseases associated with cell signaling e.g. cancer, comprises chemically modified genomic sequences of genes associated with cell signaling. 258 GTATAACCAGATTTGTCTGTGTGCGATTGTCATTACCTAGCCGTGTATCGAGAACTAGGG 318 TTTTCGAGTCAATTTTGCCCCTTTTGGTTATATCTGGTTCGATAACGATTCATCTGGATT Gaps Sequence 12870 BP; 3115 A; 234 C; 3273 G; 6248 T; 0 U; 0 Other; ö 11.3%; Score 55.8; DB 6; Length 12870; ilarity 46.5%; Pred. their complementary sequences, or a sequence (S1) chosen From 87 sequences and their complements. The chemical pretraetment Es bisulphite treatment to convert cytosines (The chemical pretraetment is bisulphite treatment to convert cytosines (Dut not methyl-cytosines) into uracils. Also included are an oligomer (II) in particular an oligomucleotide or a peptide nucleic acid (PNA) oligomer. (Comprising in each case at least one base sequence having a length of 9 nucleotides which hybridises to or is identical to a chemically pretreated DNA of genes associated with pharmacogenomics and their complements, arranged in an array for detecting SNPs (single nucleotide polymorphisms) of the 87 sequences. The caligomers may also be used as PCR primers. The set of 87 nucleic acids on their complements is useful for diagnosis and therapy of solid tumours and cancer. The present sequence represents one the 87 DNA sequences or its complement. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from MPO at

```

The invention relates to a nucleic acid comprising a sequence at least 18 bases in length of a segment of the chemically pretreated DNA of genes associated with pharmacogenomics according to one of the sequences of the genes ALDH6 (NM 000693), CYP1A (NM 000781), CYP11B (NM 000776 and NM 017460), DPYD (NM 000110), EPHX2 (NM 01979), OCLN (NM\_002538), TXXRD1 (NM\_003330), UGT8 (NM\_003360), MRP\_(NM\_004996,

New nucleic acid, oligonuclectides and peptide nucleic acid-oligomers, useful for detecting cytosine methylation state of genes associated with pharmacogenomics and for therapy of diseases e.g. cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid thetaemia, Alzhaelmer's disease, Alzhaeliepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  197

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid telemkemias, Alzheimer's disease, Alzheipsy, neurofibromatosis, rhemmatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   333
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  142

The nucleic acid may be a peptide nucleic acid origoner (PNA) of at least 9 nucleotides and may form part of a set of probes for detecting the cytosine methylation state and/or single nucleotide polymorphisms and also to be used in an array for analysing diseases associated with CPG dinucleotides e.g. cancers and tumours. The propession to be used in a method for ascertaining genetic and/or diseases or the predisposition to specific diseases, by analysing cytosine methylations. The parameters may be compared to another set of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Fragments of chemically modified genes associated with tumor suppressor genes and oncogenes, useful in designing primers and probes for analyzing diseases associated with cytosine methylation state e.g. cancer.

genetic and/or epigenetic parameters, the differences serving as basis for diagnosis and/or prognosis events which are disadvantageous to patients. The present sequence is one of the 533 genomic sequences derived from tumber sequence is one of the 533 genomic sequences and numbered Seq ID numbers are the complementary sequence of the corresponding odd numbered sequence (e.g. ID 2 and IDI, ID 536 and ID 535, accept for those whose partner sequence is missing). Note: The sequence data for this patent did not form part of the princed specification, but was obtained in electronic format directly from WIPO at fip.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     81 GITACTGICTCCGCGATCTGA-TITIACGACAATAGAGTITCGGGTTTTGICCCATICCA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   442
                                                                                                                                                                                                             The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                     142

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2565 Gitrakkigiratritririkatidaggiririritidaggikiriririkakkiridakkir 2624
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, Alzheimer's disease, Alzheimer's disease, and inflammatorid varthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              222
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          342

The present invention describes a method for detecting and differentiating between haematopoietic cell proliferative disorders associated with at least 1 gene and/or their regulatory regions in a subject. The method comprises contacting a target nucleic acid in a biological sample obtained from the subject with at least 1 reagent, which distinguishes between methylated and non-methylated CpG dinucleotides within the target nucleic acid. ABZ13861 to ABZ1118 crepresent specifically claimed nucleotide sequences from the present invention. Oligonucleotides from the present invention can be used: for differentiating between healthy haematopoietic cells and proliferative cliscorder haematopoietic cells; for differentiating between acute cliscorder haematopoietic cells; for differentiating between acute of sequences and acute myelogenous leukaemia; as probes for celated sequences and their complements; and as primers for the related sequences and their complements; and as primers for the created be used for detecting a predisposition to, differentiation between complements and sequences from the present invention can also be used for detecting a predisposition to, differentiation between cubclasses, diagnosis, prognosis, treatment and/or monitoring of haematopoietic cell proliferative disorders. The present method enables a highly specific classification of haematopoietic cell proliferative coll proliferative cell proliferative cell proliferative cell proliferative cell proliferative cell proliferative cell proliferative cell proliferative cell proliferative disorders. The present method enables a highly specific classification of haematopoietic cell proliferative disorders. The patients Detecting and differentiating between hematopoietic cell proliferative disorders, comprises contacting a target nucleic acid with a reagent that distinguishes between methylated and non-methylated CpG dinucleotides. Detecting and differentiating between colon cell proliferative disorders associated with a gene or its regulatory regions comprises contacting a target nucleic acid in a biological sample obtained from the subject with

Claim 32; SEQ ID NO 275; 74pp; English.

The invention relates to a novel method for detecting and differentiating between colon cell proliferative disorders associated with at least one gene or its regulatory regions. The method comprises contracting a target nucleic acid in a biological sample obtained from the subject with at least one reagent or ascries of reagents, where the reagent or series of reagents, where the reagent or series of includence that the nucleic acid. The molecules of the invention demonstrate cytostatic activity whilst the method may useful for detecting and differentiating between colon cell proliferative for disorders, including cancers such as colon adenome and colon carcinoma. The PNA (peptide nucleic acid)-oligomers are useful as probes for determining cytosine methylation state or single nucleotide propagatory. The current sequence is that of the pretreated genomic DNA

The invention relates to a method of detecting and differentiating considers to the invention relates to a method of detecting and differentiating considers associated with at least cone gene and/or their regulatory regions in a subject by contacting a target nucleic acid in a biological sample obtained from the subject with at least one reagent or series of reagents that distinguish between considering and non-methylated sample obtained from the subject with the target nucleic acid. The genes and/or their regulatory regions are preferably selected from MDRI, CSNXZB, EGR4, AR, CDK4, RB2, CDC25A, GPID beta, MYDDI, CDH3, CK MYCLI, BERL1, APC, BCL2, CDH1, CDKNLA, CDKNZB, CDKNZB, CDKNZB, CGXZB, GRIZB, APARI, BAX, BAX OR HOXAS. Oligomers, peptide nucleic acid (PNA)-oligomers and/or isolated nucleic acids based on the sequences of the genes are useful for detecting the methylation state of all the cyclosine methylation state and or single nucleotide conditions such as diffuse large Bacell lymphoma, mantle cell lymphoma, chronic lymphocytic leukemia, small lymphocytic lymphoma and follicular conditions under are useful. for detecting the methylation transcribers and or single nucleotide conditions the sequence conditions the use useful seases differentiation between subclasses, diagnosis, treating and/or expressents a nucleic acid of a pretreated genomic DNA derived from the above above mentices.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ä

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              180
plants from INRA (Versailles). The DNA fragment(s) resulting from the PCR were directly sequenced from the left or the right border to determine the genomic sequence flanking the insertion. T-DNA derived sequences were removed. Information to order the corresponding mutant line and a link to a database providing a graphical display of the insertion site are available at http://dbsgap.versailles.inra.fr/publiclines/. This sequence has been generated in the framework of the French plant genomics program 'Genoplante' (http://www.genoplante.com and http://genoplante-info.infobiogen.fr).

                                              AE014820
                                                                                                                                                                                                                                             During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with colly a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

EMS: SW: SWISSEROT; Tr:, TREMBL; WP:, WORWEPP: Information on the WORWEPP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep Clone-derived length of monoucleotide A/T runs and conserved TR repeats. Where length of monoucleotide A/T runs and conserved TR repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    50033 İTİACİTTAİTİTTATTTİĞTİATTİTAİTİTAACTİTİATİTİCAİACATIĞTATTİCATA 49974

                                                                                                                                                                                                                                          Sequence 2, Application US/07867106
Patent No. 5389526
GENERAL INPORMATION:
APPLICANT: Cland, Martin B
APPLICANT: Cland, Andy C M
APPLICANT: Cland, Andy C M
APPLICANT: Cland, Reith L
TITLE OF INVENTION: Improved Plasmid Vectors for Cellular
TITLE OF INVENTION: Slime Moulds of the Genus Dictyostellum
NUMBER OF SEQUENCES: 19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SOFTWARE:

Sequence 86, Application US/10204708
Patent No. 6677731
GENERAL WINFORMATION:
GENERAL PREPRIEDRY: OLEK, Alexander
APPLICANT: OLEK, Alexander
APPLICANT: PERPRIBENCE, Christian
APPLICANT: BERLIN, Kurt
TITLE OF INVENTION: Diagnosis of Diseases Associated with DNA Replication
TITLE OF INVENTION: by Assessing DNA Methylation
                                                                                                                                                                                                                                                                                                                                                                                Sequence 21, Application US/09627122

Patent No. 6472521
